

## **IMPORTANT ANNOUNCEMENT - ACCFIN JOINT VENTURE WITH EGIS SOFTWARE**

Accfin Software has great pleasure in announcing a joint venture with a company called Egis Software. Years in the making we will now be marketing Egis's software product called **PaperTrail** under the name of **Doc-Em**. What is so exciting about this venture is that we have negotiated very special pricing (details to be released soon) for the accounting profession simply because we have linked the product to Professional Series.

**PaperTrail** is a full feature document management system that has been sold into many South African Corporate Companies and Banks across the South African spectrum. It is an enterprise wide system. The decision to link our back office suite of products to the market leading Document Management System in South Africa will give our users an opportunity to optimize their filing in a secure tamper proof environment as well as allowing instant access to any piece of paper that has been filed in the system. Even more important than this is that it makes our back office complete and the system of choice for all accounting firms.

Full details of the system will shortly be available on our website.

There will be some modifications to Professional Series in the way we use the **Send to** option, there will be a new feature called "**File Document**" and by clicking on this feature the document will be produced (i.e. a tax letter, a share ledger, an invoice or a statement, a tax report, A cm27 etc) and will be written to a special folder on the network with a unique file naming convention. The Document Management System will then poll the folder on a regular basis and read the document automatically into the right place, i.e. the right filing cabinet in **DOC-EM** and convert to PDF retaining the original if need be which can be edited retaining the different versions of the document.

Not only can DOC-EM be used with Professional Series but it can also be used for all the other filing aspects in the accountant's office that extend beyond Professional Series. It can of course be connected to your scanner of choice as well.

We are sure that you will find this product as exciting as we do!

We will be holding an official launch breakfast during the month of April where we will demonstrate the product.

Kind regards

Mark
